ADULT LEARNING TO LEARN COMPETENCE NEEDS, OPPORTUNITIES AND INFLUENCE ON PERSONAL, PROFESSIONAL AND SOCIAL ACTIVITY

- ***The goal of this study is to identify*** the connection between the competence of learning to learn and adults' personal, professional and social experience.
- ***The methodology.*** The research basis is subjective-interpretational-constructivist conception (Berger and Luckman, 1999). The study argues that learning to learn competence is formed, developed and constructed through personal, professional and social experience during all human life.

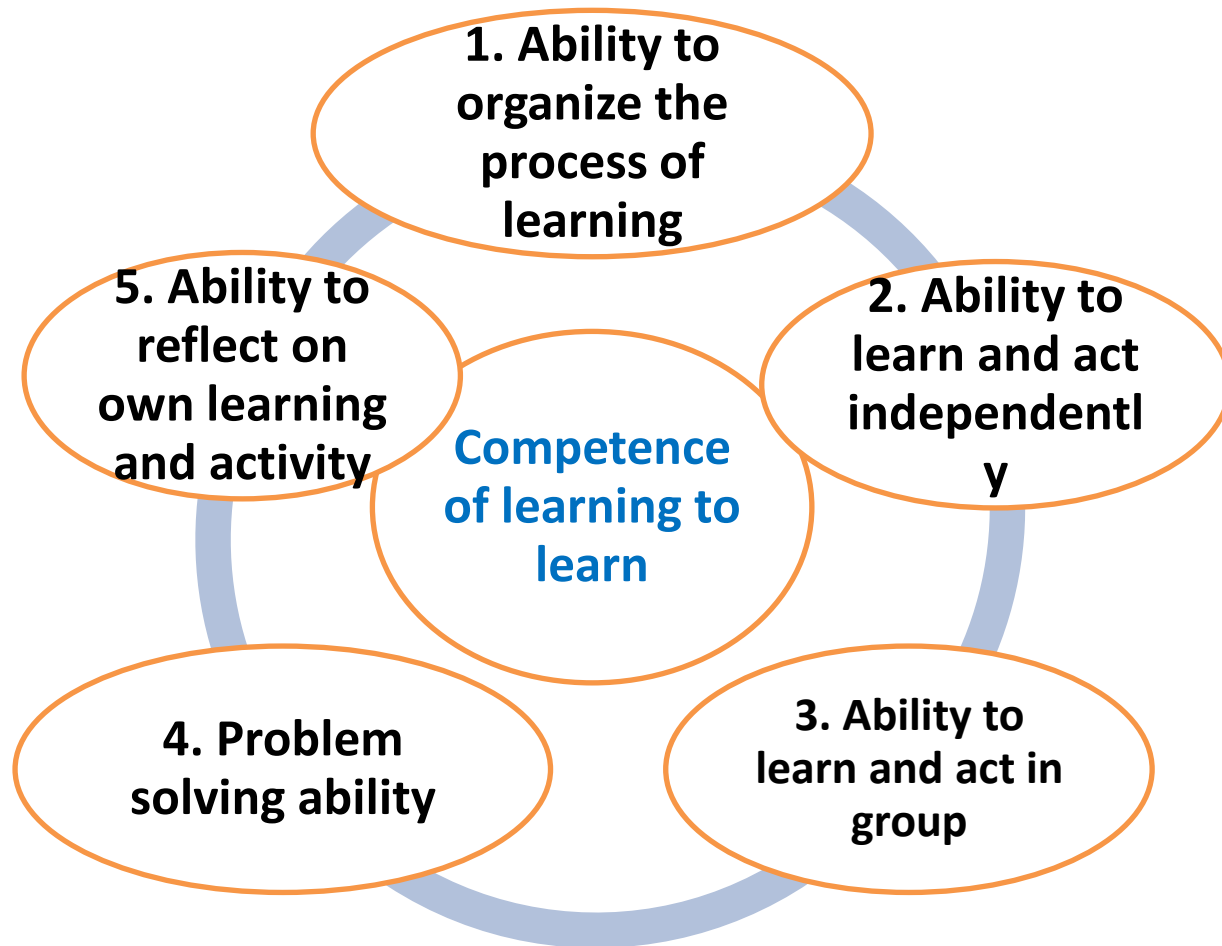

Key competences for lifelong learning

(Key competences for LLL. Recommendation of the European Parliament and of the Council, 2006)

Competence of learning to learn

Empirical research and it's results

The quantitative research of learning to learn was carried out to determine the learning to learn competence needs, opportunities and influence on their personal, professional and social activity for adults.

The study involved the survey of **3000** adults of all ages from all over Lithuania.

Of the age of respondents

Occupational status of respondents

Importance of learning to learn for adults in personal, professional and social activity at different age stages

The significant of abilities of the learning to learn competence in different spheres

Factors stimulating adults' learning

Obstacles faced when developing the learning of adults

Conclusion(1)

- The analysis of the concept of learning to learn, according to the respondents' point of view, revealed that learning to learn skills play an important role in finding a job, keeping the job, in professional career and participating in professional activities.
- The results showed that mostly respondents develop their learning to learn competence in every day life. Usually they choose the ways of their learning to learn competence development according to their personal, professional or social needs.

Conclusion(2)

- While identifying adult learning to learn needs, possibilities and their influence on personal, professional and social activity, the results show that the respondents believe that the learning to learn competence is very important in the following spheres: personal development, professional activity, completing work tasks, career pursuit and fulfilling civil obligations.
